A NEW LAYER FOR YOUR PALETTE

Lighting has always come from above. *Until now.*

LiteLüvr is the world's first window-integrated lighting system — a genuinely new ambient layer that shifts the origin of light from the ceiling to the architecture of the room. It is not a shutter. It is not a fixture. It is something entirely new to specify.

01 · ORIGIN OF LIGHT

Light from the vertical plane

Ambient illumination from the window itself — not from above. Reduces ceiling penetrations and fixture count without sacrificing design intent.

02 · SUPER DIFFUSION

Shadow-free, glare-free

A purpose-built diffusion layer eliminates hotspots at the source. The light reads more like atmosphere than illumination.

03 · DUAL FUNCTION

Lighting and privacy in one

Full window-covering functionality retained. One permanent architectural element. Nothing added, nothing visible.

CREDENTIALS & ENGINEERING

50,000
hours of LED life

< 4W
per square foot at full brightness

Low Voltage DC
no electrician required at the window

US & Int'l Patents
WCMA Best New Technical Innovation

Technical Specification

Louver	**3.5" medical-grade polycarbonate**
Light source	**Integrated LED arrays per louver**
CCT options	**Warm White or Bright White**
Diffusion	**Purpose-built layer, shadow-free**
Frame	**Solid cellular PVC, UV & flame retardant**
Control	**Touch surface · iOS & Android app**
Scheduling	**Sunrise / sunset simulation**
Louvers	**Field-replaceable by design**

Specified For

Hospitality Suites · Primary Bedrooms · Wellness Spaces · Healthcare · Luxury Remodels · Poor-View Windows · Media Rooms · Spa & Treatment

LiteLüvr extends an ambient layer without ceiling dependency. It does not replace task or accent lighting — it gives the room a calmer, cleaner base to design around. Frame profiles include Classic, Flat, L-Frame, Traditional, and Z-Frame to integrate with existing trim language.

Move ambient light away from ceilings and into the architecture of the room.
